Cambridge Forklift Training Classes

Cambridge Forklift Training Classes - Lift trucks are a kind of heavy lifting equipment made use of in order to move and handle material safely and efficiently. Occasionally called Lift Trucks, they are made use of in a variety of businesses. Staff working with and around forklifts need to be trained to recognize hazards related with the use of forklifts.

We offer forklift training classes in order to teach our trainees how to safely operate a forklift. The theory segment of the course will cover classes and instruction on becoming a forklift operator. People training will learn their legal tasks as lift truck operators. Upon completion of the classes, a printed certificate will be given. The certificate has to be signed by somebody qualified to verify that a hands-on evaluation has been finished within the trainee's workplace.

Forklift Safety

Forklift trucks are important in industrial workplaces for their ability to lift and transport heavy loads. Forklifts are indispensable to several industrial worksites, but forklifts can be dangerous without properly training workers. Lift truck injuries, when they occur, tend to be serious due to the power of these heavy equipment. Employees who work often around lift trucks could become complacent and forget the dangers. Vital operating and maintenance procedures could be ignored.

Forklift training is necessary not only for new employees. Periodic re-training is essential for all operators. First aid training is important also.

The daily inspection is critically essential in the everyday maintenance and operations of a forklift. The lift truck may become damage if not properly maintained. Prior to being used, forklifts have to be visually inspected as to their general condition. An operational check must be performed to be able to determine the machine is working right. The supervisor needs to be alerted if anything is noted which could impact the safe use of the forklift.

A check determines if the place is clear of objects that can pose a danger. Any overhead obstructions should be noted. Check that a functioning fire extinguisher is accessible. Different levels must be inspected, like for instance radiator water, engine oil, fuel, and electrolyte levels in cells. Battery, cables and plug must be inspected. Unclog vent caps and ensure that nuts, bolts, guards, chains, and hydraulic hose reels are not loose, damaged or missing. A tire inspection will ensure that wheels are not worn or damaged. Pneumatic tires would need a pressure inspection.
